Property Details

Numerous locations

Product Installed

Four i200s

Installed Capacity

800,000 BTU/hr

Zero Gallons storage

Installation Date

2014 till current

Representative

Various reps all over North America

Numerous store locations

This customer is an American membership-only warehouse club that provides a wide selection of merchandise. It is the largest membership-only warehouse club in the United States.

Spec'd into store design

Since 2014, Intellihot's tankless water heater systems have been made part of the engineering specs of their stores. So every new store that has been built since 2014, is being powered by Intellihot's commercial tankless water heating systems.

The Problem

The customer needed a large amount of hot water for the meat and produce section in the back, and moderate amount of hot water for the snack room and restrooms in the front. Space was at a premium so the water heaters had to be small and preferably off the floor.

The Intellihot Solution

Intellihot designed a split system setup for them consisting of one loop of three i200's servicing the back half of the store, and a second loop consisting of one i200 for the front half of the store.

Endless water, Zero waste

Our systems are smart; from the moment they start running, they begin to learn typical usage patterns. They adapt, heating up the amount of water you need: no more; no less. While traditional boilers run 24/7/365 waiting to be used, Intellihot systems heat water on demand and keep it flowing when and where people need it. Our process conserves up to 40% of the energy lost in traditional water heating methods. No more waiting, no more wasting.

Less is more

Intellihot saves money, time and space from installation to operation. Our technology gets up and running quickly and costs less to operate month after month. With all the power of alternative systems at a fraction of the size, our design makes space-hogging boilers and storage tanks totally obsolete.

Too smart to fail

What we make performs to nearly impossible standards. As robust as diesel engines, Intellihot systems are built for decades of like-new operation. Reliability is designed into every inch, from maintenance-free heat exchangers to systems that deliver industrial water capacities without risk of single-point failure. The best part? Built in redundancy and no master controller with our patented masterless cascading technology.

Change Made Effortless

Technology should adapt to people, not the other way around. Our systems are simple to install, use and maintain - for our customers and our customers' customers. Even as our innovations operate out of sight, every aspect is crafted to be enjoyable, intuitive and surprisingly smart.
