

Intellihot

Worldmark Anaheim Saves Money and Reputation with Intellihot.

This large, vacation ownership property received complaints from customers experiencing issues with water pressure and temperature stability. The outdated boilers were also becoming costly and inconvenient to operate and repair. Management found its hero in Intellihot's efficient, reliable water heaters, saving the resort's reputation and wasteful spending.

Worldmark Anaheim - Anaheim, CA

Located in sunny Southern California, the Worldmark Anaheim is a popular destination for Disneyland fans who prefer the short walk to Disney's entrance. It offers guests the ultimate vacation experience with top-notch amenities including a large pool, two rooftop hot tubs, a BBQ area and relaxing suites for the entire family.

The Problem

Management was starting to receive complaints about low water pressure and temperature instability from guests in the lower levels of the building. The existing, outdated hot water system was not only hurting the property's reputation, but also its wallet due to major inefficiencies and large amounts of stored water.

The Intellihot Solution

Two iQ1501s are handling the entire building, easily keeping up with demand and delivering precise temperature and water pressure to guests. With Intellihot's highly efficient units, management eliminated the need for storage and enjoys a 30% reduction in natural gas consumption over the old system.

Endless water, Zero waste

Our systems are smart; from the moment they start running, they begin to learn typical usage patterns. They adapt, heating up the amount of water you need: no more; no less. While traditional boilers run 24/7/365 waiting to be used, Intellihot systems heat water on demand and keep it flowing when and where people need it. Our process conserves up to 40% of the energy lost in traditional water heating methods. No more waiting, no more wasting.

Less is more

Intellihot saves money, time and space from installation to operation. Our technology gets up and running quickly and costs less to operate month after month. With all the power of alternative systems at a fraction of the size, our design makes space-hogging boilers and storage tanks totally obsolete.

Too smart to fail

What we make performs to nearly impossible standards. As robust as diesel engines, Intellihot systems are built for decades of like-new operation. Reliability is designed into every inch, from maintenance-free heat exchangers to systems that deliver industrial water capacities without risk of single-point failure. The best part? Built in redundancy and no master controller with our patented masterless cascading technology.

Change Made Effortless

Technology should adapt to people, not the other way around. Our systems are simple to install, use and maintain - for our customers and our customers' customers. Even as our innovations operate out of sight, every aspect is crafted to be enjoyable, intuitive and surprisingly smart.
