PRESSURE DROP VS. FLOW RATE

KEY FEATURES

- 1 Weldless 316L Stainless Steel Heat Exchanger with Individual Controls for Masterless Cascading
- · ASME-HLW Compliant | Designed & Built in the U.S.
- Factory monitoring via telliCare messaging.
- Turn Down Ratio 13.3:1 per Unit, Cascade Up to 4 Units for 53:1 Turndown

iN401 Short Spec & Accessories

The water heater shall be a direct fired tankless, fully condensing, water-tube design. The power burner shall have full modulation. The minimum firing rate shall not exceed 30,000 BTU/HR. The heat exchanger shall be constructed with 316L stainless steel helical water tube and be fully floating with no welded joints. The water heater control system shall incorporate onboard multi-unit sequencing logic that would allow masterless cascading without the need for a master controller. The heat exchangers shall sequence between each other, operating in parallel to meet the load. Each heat exchanger will default to individual control upon failure of the sequencing chain. Changes to operational parameters on any one of the heat exchangers will automatically adjust all other heat exchangers to the most recent parameter change. The water heater shall utilize a low loss header design that utilizes an internal pump and heat exchanger bypass to reduce pressure drop through the vessel.

Recommended Accessories iN401:

1. Condensate Neutralizer Kit

This condensate is acidic, with a pH level between 3 and 4. Local building codes apply for an in-line neutralizer to be installed (not included) to treat this water.

2. Outdoor Installation Kit

3. iBMS BacNET

Intellihot's iNTouch BMS has three unique features that are not available in any other BMS in the industry.

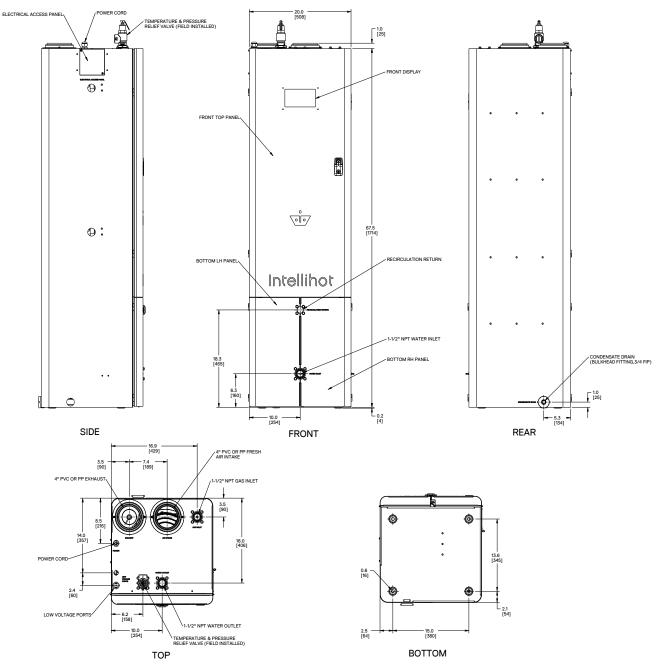

- External Pump Power Powers building recirculation.
- Remote Setpoint Allows the temperature to be set remotely via a 0-10 VDC or 4-20mA signal.
- Alarm Buzzes if it detects anything wrong with any of the components it is connected to, and communicates the appropriate error codes so that the user knows which component needs attention.

Any additional requirements from local codes and ordinances shall supersede this diagram. 2. Units are not to be installed in a closed loop system. Our gas fired units are HLW stamped. For pipe sizes and gas pressure requirements, please refer to the operation and installation manual. Gas pressure regulators to be installed for each unit. Follow manufacturer's installation instructions. 4. 5 Water hammer arrestor comes installed in the units. Mixing Valves, Pumps, Y-strainers, other Valves etc. to be installed according to their manufacturer's instructions. DRAWING NUMBER: 6 JOB NAME Temperature and pressure relief valve (shipped with the unit) to be installed on the top hot water port. Expansion tank to be sized based on the gallons of water in the plumbing system and to be installed per manufacturer's instruction. 8. iN401 Venting Guidelines

Maximum Pipe Length in Feet

Number of Units	Venting Type	4" Diameter	6" Diameter	8" Diameter
	.,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	iN 401	iN 401	iN401
4	1 Pipe	250	250	250
	2 Pipe	125	125	125
2	1 Pipe	82	250	250
2	2 Pipe	41	125	125
3	1 Pipe	40	250	250
3	2 Pipe	20	125	125
4	1 Pipe	-	-	250
4	2 Pipe	-	-	125

1 Pipe - Only exhaust out pipe is connected and the combustion air intake is from within the room. For example, one iN401 with a 4" diameter, the maximum exhaust pipe length for 1 pipe is 250 feet.

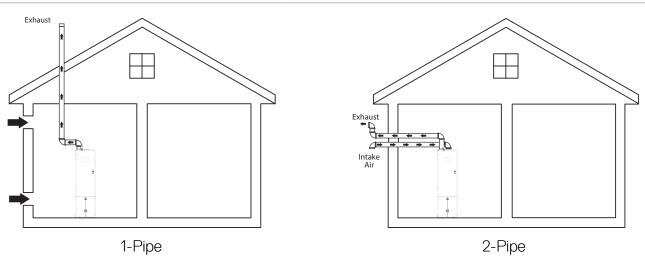

2 Pipes - Both the Combustion air intake and the exhaust pipe are connected. In this case, the table specifies the maximum length per pipe. For example, one iN401 with 4" diameter, 125 feet maximum is allowed for combustion air intake pipe and exhaust out pipe. The 125 feet maximum is per pipe.

Note:

1. Reduce the maximum equivalent length above by 5 feet per 90° elbow used and by 2 feet per 45° elbow used. Do not exceed the above set limits.

2. If multiple units are common vented, then the units must be cascaded. Please refer to the combustion section for how to do combustion with common vented units.

3. SAFETY INSTRUCTIONS: Do not connect any other appliance vents to the water heater inlet or outlet pipes.

iN401 Electrical Data

Electrical power required for the water heater is 120V AC, 60 Hz. The circuit breaker shall be sized for a power consumption of 15A (FLA). Larger breakers can be used for multiple units. Please ensure correct polarity of wiring before powering up unit.
